

Flat Plate Solar Collector

This high-efficiency flat-plate collector is designed for solar thermal applications. It is suitable for domestic hot water production, space heating, and industrial process heating systems.

Overview

High-Efficiency Solar Thermal Solution

This high-efficiency flat-plate collector is engineered for optimal solar energy absorption in various thermal applications. Featuring a durable absorber plate with a specialized selective coating, it minimizes heat loss while maximizing performance. Built with high-quality, resilient materials, it is designed to withstand diverse environmental conditions for long-lasting reliability.

Applications

Primary Applications

Domestic Hot Water, Space Heating, Industrial Process Heating

Design & Construction

Key Construction Features

- Durable absorber plate
- Selective coating for high absorption
- Designed for minimal heat loss
- Weather-resistant materials
- Easy system integration

Installation

Easy installation and integration
