

Flat Plate Solar Collector for Thermal Applications

High-efficiency flat-plate solar collector designed for optimal solar energy absorption and heat transfer. It features durable construction with a robust frame and high-transmittance glass cover, suitable for various solar thermal applications.

Product Overview

High-Efficiency Thermal Solution

The To Revere series flat-plate solar collector is engineered for superior solar energy absorption and efficient heat transfer. Built with a robust frame and high-transmittance glass cover, this collector offers exceptional durability for demanding environments. It is a versatile choice for domestic hot water systems, space heating, and complex industrial process heating applications, ensuring reliable long-term performance.

Technical Specifications

Performance Rating

Five Star

Supported Applications

Domestic Hot Water, Space Heating, Industrial Process Heating, Engineering Contracting

Construction

Build Features

- Durable robust frame construction
- High-transmittance glass cover for optimal absorption
- Designed for longevity and consistent output
