

# Flexible Carbon Steel Hacksaw Blades for Metal Cutting

These flexible hacksaw blades are constructed from carbon steel and optimized for metal cutting. The blades feature a fine tooth pitch, ensuring smooth and precise cuts in a variety of metalworking applications.

## Product Overview

### Flexible Carbon Steel Hacksaw Blades

These high-quality carbon steel hacksaw blades are engineered with a flexible design featuring tempered tips and a stiffened back for enhanced durability. They are exceptionally well-suited for cutting through pipe, tubing, and solid materials with ease. Versatile in application, these blades effectively cut wood, plastic, low-alloy, and medium-hardness steel, making them a reliable choice for diverse metalworking tasks.

## Technical Specifications

Blade Length	300 mm
Blade Length (Imperial)	12 in
Teeth Per Inch (TPI)	24

## Material & Construction

Material Composition	Carbon Steel
Key Features	Flexible Blade, Tempered Tips, Stiffened Back, Fine Tooth Pitch

## Applications

### Suitable Materials

- Pipe
- Tubing
- Solid Metal
- Wood
- Plastic
- Low-alloy Steel
- Medium-hardness Steel
