

Flexible Intermediate Bulk Container

This flexible intermediate bulk container (FIBC) is designed for storing and transporting dry, flowable products. It features lifting loops and filling/discharge spouts for efficient handling.

Product Overview

Versatile Bulk Handling Solution

This Flexible Intermediate Bulk Container (FIBC), commonly referred to as a bulk bag or big bag, is engineered for the efficient storage and transport of dry, flowable products. Its durable woven polypropylene construction ensures high strength for handling powders, granules, and flakes. Designed with integrated lifting loops and specialized spouts, this container maximizes stability and facilitates seamless filling and discharge operations.

Technical Specifications

Design Features

- Filling spout at top
- Discharge spout at bottom
- Cubic shape for storage optimization

Primary Applications

Dry Powders • Granules • Flakes

Material

Woven Polypropylene

Handling Features

Lifting Loops, Forklift Compatible, Crane Compatible
