

Flexible Material Slitting and Rewinding Machine

High-precision slitting and rewinding machine designed for converting flexible materials such as films, foils, and laminates. It features automatic tension control, web guiding system, and precise slitting mechanisms for producing high-quality rolls.

Overview

High-Precision Material Conversion

This flexible material slitting and rewinding machine is engineered for high-precision conversion of films, foils, and laminates. It integrates advanced features such as automatic tension control and a web guiding system to ensure consistent, high-quality output. Designed for efficiency, it is an ideal solution for packaging applications requiring accurate material processing and roll production.

Key Features

Core Technologies

- Automatic tension control system
- Advanced web guiding system
- High-precision slitting mechanism

Compatible Materials

Films, Foils, Laminates

Application

Primary Industry

Packaging Machinery
