

Flexible Metal Conduit for Woodworking Machinery

This flexible metal conduit protects electrical wiring within woodworking machinery. Its corrugated metal construction provides flexibility for routing in tight spaces.

Product Overview

Industrial Protection for Woodworking

This flexible metal conduit is specifically engineered to provide robust mechanical protection for electrical wiring in demanding woodworking machinery environments. Featuring a high-quality corrugated metal construction with a braided exterior, the design ensures exceptional durability and flexibility for dynamic machine parts. It serves as an essential solution for maintaining operational safety and preventing electrical hazards in high-dust and high-vibration manufacturing conditions.

Technical Specifications

Key Features

- High flexibility
- Corrugated structure
- Braided external reinforcement
- Mechanical protection

Construction Material

Corrugated Metal with Braided Exterior

Primary Application

Woodworking Machinery, Electrical Conduit, Machine Protection

Dimensions

Standardized Dimensions

L • L1 • L2 • D • W
