

Flexible Metallic Conduit with Braided Exterior

This flexible metallic conduit features a braided exterior for enhanced durability. It is ideal for protecting cables in applications requiring both flexibility and resistance to abrasion.

Product Overview

Flexible Metallic Conduit with Braided Exterior

This flexible metallic conduit is engineered for demanding industrial environments where both flexibility and robust protection are required. Featuring a braided exterior, the conduit offers enhanced mechanical strength and superior resistance to abrasion for internal components. It is designed with precision end fittings to ensure secure connections and reliable performance in complex machinery and installation setups.

Technical Specifications

Dimensional Parameters

- L (Total Length)
- L1 (Fitting Length 1)
- L2 (Fitting Length 2)
- D (Diameter)
- B (Braid Specification)
- RC (Radius of Curvature/Connection)

Key Performance Metrics

1 High

Mechanical Protection Level

1 High
