

Flexible Stainless Steel Water Heater Connector

This flexible connector is constructed from stainless steel. It is designed for connecting water heaters to water supply lines.

Product Overview

Flexible Stainless Steel Water Heater Connector

This flexible stainless steel water heater connector is engineered for reliable performance in residential and commercial plumbing systems. Featuring a high-quality SS304 braided exterior and a durable PVC inner tube, it provides excellent resistance to corrosion and flexibility for easy installation. With cUPC approval, this connector is designed for secure and compliant potable water supply connections.

Technical Details

Certifications

cUPC Approved

Construction Materials

SS304 Stainless Steel, PVC Inner Tube, Brass Nut, Brass Insert

Key Features

Performance Features

- Braided stainless steel outer layer
- Corrosion-resistant construction
- Designed for potable water applications
- Flexible design for simplified installation
- High-pressure and temperature withstand capacity
