

Flexible Steel Conduit for Cable Protection

This flexible steel conduit protects electrical wiring in demanding environments. It features a helically wound steel core and a protective outer jacket, offering crush, impact, moisture, chemical, and abrasion resistance.

Overview

Flexible Steel Conduit for Industrial Cable Protection

This flexible steel conduit is engineered for robust cable protection in demanding industrial environments. Featuring a helically wound steel core, it delivers exceptional crush and impact resistance while maintaining high flexibility for routing through tight spaces. The outer jacket provides reliable defense against moisture, chemicals, and abrasion, making it an ideal solution for securing electrical wiring and providing electromagnetic shielding for sensitive electronic equipment.
