

Flexographic Printing Machine

This flexographic printing machine is designed for high-speed, multi-color printing on various substrates. It features a modular design for customization and incorporates advanced tension control for consistent web handling and precise registration.

Overview

High-Performance Flexographic Printing Solution

The HDFP1050 is a high-speed, multi-color flexographic printing machine engineered for versatility across diverse substrates. Featuring a modular design, it offers extensive customization options to adapt to specific production requirements. With advanced tension control and automated systems, this machine ensures precise registration and consistent web handling, significantly optimizing productivity while minimizing downtime.

Technical Capabilities

Automation & Control

- Advanced tension control system
- Automated web handling
- User-friendly interface for parameter monitoring

Printing Capabilities

Multi-color printing, High-speed, Variable substrate support

Design & Construction

Build Quality

Robust construction • Industrial grade • High durability

Design Architecture

Modular design for customization and expansion

Compliance & Safety

Industry Compliance

Yes
