

Float Switch for Water Pumps

This float switch is designed for water pumps and liquid level control. It delivers accurate level sensing to automatically control the pump's operation.

Product Overview

Reliable Liquid Level Control

This durable float switch is engineered for precise automatic operation of water pumps in various liquid management systems. Designed to ensure reliable level sensing, it effectively prevents dry running and overfilling in tanks, wells, and sumps. Its robust construction ensures long-term performance in demanding fluid environments, making it an essential component for professional water pump installations.

Technical Specifications

Suitable Environments	Water Tanks, Wells, Sumps
Operational Function	Automatic level sensing and pump activation/deactivation
Housing Material	Durable Plastic
