

Floating Aeration Pump

This multi-functional aerator is a self-floating pump. It is designed for efficient water transfer and aeration in various applications.

Overview

High-Efficiency Floating Aeration Pump

This floating aeration pump is engineered for reliable water transfer and circulation in diverse environments like ponds, lakes, and tanks. Its self-floating design facilitates rapid deployment, while the robust 1500W motor ensures consistent performance for agricultural and aquaculture needs. With a maximum capacity of 40 cubic meters per hour and a 6-meter head, it offers a versatile solution for efficient water management.

Technical Specifications

Rated Power	1500 W
Voltage & Phase	220V, 3-phase
Outlet Diameter	3 inch

Performance Metrics

Key Performance Metrics

40 CBM/Hour
Max Capacity

6 m
Max Head

Physical Characteristics

Net Weight	14 kg
Design Features	Floating Design, Portable, Expandable Piping
