

Floor and Benchtop Grinding Machine

This versatile grinding machine can be configured for floor stand or benchtop use. It is designed for general machinery applications, providing flexibility in diverse industrial environments and offering robust construction for efficient grinding.

Product Overview

Versatile Grinding Solution

This grinding machine is engineered for versatility, offering a dual-configuration design suitable for both floor-standing and benchtop industrial applications. It is built with a robust construction to ensure durability and consistent performance when shaping, sharpening, and finishing metal components. Designed for general machinery tasks, this unit provides the flexibility needed for various workshop and manufacturing environments.

Technical Specifications

Primary Applications

- Metal shaping
- Tool sharpening
- Finishing metal parts
- General machinery maintenance

Build Quality

Robust Construction • Industrial Grade

Configuration

Floor Stand, Benchtop
