

Floor-Standing Hot and Cold Water Dispenser with Filtration

This floor-standing water dispenser offers both hot and cold water through separate taps. It incorporates a multi-stage filtration system, including sediment, carbon, and RO membrane filters, and a pressure pump to ensure purified water.

Overview

High-Efficiency Water Purification

The YLR2-5D2J floor-standing water dispenser provides a reliable solution for clean drinking water in professional environments. Featuring an integrated multi-stage filtration system including sediment, carbon, and reverse osmosis stages, it ensures high-quality output for both hot and cold water needs. The unit includes an internal pressure pump for consistent flow and is designed with a convenient hinged door for simplified maintenance and filter replacement.
