

Flow Control Butterfly Valve

This butterfly valve is a robust industrial component designed for flow control in various applications. It features a disc-shaped closure element that rotates within the valve body to regulate or obstruct fluid passage.

Overview

Robust Flow Control Solution

This butterfly valve is a robust industrial component designed for efficient flow control in various demanding applications. It features a disc-shaped closure element that rotates within the valve body to effectively regulate or obstruct fluid passage. With its compact design, the valve offers easy installation and high flow capacity, ensuring reliable performance in water treatment, chemical processing, and HVAC systems.

Key Features

Key Benefits

- Compact design for space-saving installation
- High flow capacity
- Tight shut-off capability
- Durable construction for demanding conditions

Applications

Suitable Industries

Water Treatment, Chemical Processing, HVAC Systems

Technical Details

Design Type

Butterfly Valve

Closure Mechanism

Rotating disc
