

Fluid Check Valve

This valve allows fluid to flow in only one direction, preventing backflow. It is suitable for various applications requiring reliable directional control.

Product Overview

High-Performance Fluid Control

This fluid check valve is integrated into a close-coupled centrifugal pump system specifically designed for handling corrosive chemicals. The robust construction features a chemical-resistant housing, likely polypropylene, ensuring long-term durability in harsh industrial environments. Its compact design directly mounts to an electric motor, providing an efficient solution for reliable chemical transfer and leakage prevention.

Design & Construction

Key Components

- Volute casing
- Impeller
- Mechanical seal
- Electric motor

Pump Type	Close-coupled centrifugal pump
Housing Material	Chemical-resistant material (e.g., Polypropylene)

Performance Features

Leakage Prevention Mechanical Seal

Application Suitability	Corrosive Chemicals, Industrial Applications, Chemical Resistance
-------------------------	---

Technical Configuration

Design Benefits

- Compact unit footprint
- Efficient power transfer
- Robust construction

Mounting Style	Directly mounted to electric motor
----------------	------------------------------------
