

Fluid Circulation Water Pump

This water pump is designed for efficient fluid circulation in various applications. It features a robust cast construction for durability and longevity.

Product Overview

High-Efficiency Fluid Circulation

The CH104 fluid circulation pump is engineered for demanding agricultural environments, specifically supporting drainage and irrigation systems. Built with a robust cast construction, it ensures long-term durability and consistent performance under stress. Its precision-engineered impeller maximizes flow rate and pressure, while the standardized mounting configuration allows for seamless integration into existing infrastructure.

Technical Specifications

Model	CH104
Housing Material	Cast
Target Applications	Agriculture Machinery, Drainage Systems, Irrigation

Installation and Compatibility

Installation Benefits

- Easy installation process
- High system compatibility
- Designed for reliable operation

Mounting Type	Standard configuration
