

# Fluid Control Ball Valve with Lever Handle

This ball valve is designed for fluid control in various applications. It features a metal body and a lever handle for manual operation, along with threaded connections for easy installation.

## Product Overview

### Reliable Fluid Control Solution

This durable ball valve is engineered for precise fluid control in both industrial and residential piping systems. Featuring a robust metal body and an ergonomic lever handle, it ensures reliable shut-off functionality and ease of operation. The full-bore design minimizes pressure drop, making it an efficient choice for demanding flow management applications.

## Technical Specifications

### Flow Design

Full Bore

### Valve Type

Ball Valve

### Operation

Manual Lever Handle

### Connection Type

Threaded

### Construction Material

Polished Metal, Durable Alloy

## Application

### Suitable Applications

- Industrial Piping Systems
- Residential Plumbing
- Fluid Control Applications
