

# Fluid Control Valve for Cleaning Machines

This cleaning machine valve features a robust brass body with threaded ends. It is equipped with a quarter-turn ball valve mechanism, controlled by a lever handle for easy on/off operation.

## Product Overview

### High-Performance Fluid Control

This fluid control valve is engineered specifically for integration into professional cleaning machines. Featuring a durable brass body construction, it ensures reliability and longevity in demanding operational environments. The quarter-turn ball valve mechanism allows for precise, rapid fluid control, while the ergonomic lever handle provides intuitive on/off operation for improved workflow efficiency.

## Technical Specifications

|                  |                         |
|------------------|-------------------------|
| Body Material    | Brass                   |
| Valve Mechanism  | Quarter-turn ball valve |
| Connection Style | Threaded ends           |
| Control Method   | Lever handle            |

## Applications

|                      |   |
|----------------------|---|
| Primary Applications | Cleaning Equipment, Fluid Control Systems, Industrial Machinery |
