

Fluid Level and Pressure Monitoring Device

This device monitors fluid levels and pressure within a system. It includes a graduated container, a pressure gauge, and ports for tubing connections.

Product Overview

Precision Monitoring Solution

This fluid level and pressure monitoring device is engineered for accurate system regulation and control. Featuring an integrated graduated container and a mounted pressure gauge, it allows for real-time observation of fluid dynamics within industrial processes. Its robust frame design ensures stability and reliable performance in demanding environments.

Technical Specifications

Monitoring Functions

- Fluid level observation
- Pressure regulation
- System connectivity via tubing ports

Construction

Reinforced Frame • Sealed Container

Design Features

Graduated Container, Integrated Pressure Gauge, Multi-port Connection, Support Frame
