

Fluid Level Monitoring System

This system features a translucent reservoir with attached tubing and electrical components. It is designed for applications requiring precise fluid management and electronic integration.

Overview

Precision Fluid Management

This fluid level monitoring system is designed for high-precision applications requiring reliable fluid management and electronic integration. Featuring a translucent reservoir, it allows for clear visual inspection of fluid levels while providing seamless connectivity via integrated electrical components. Ideal for cooling, cleaning, or specialized fluid handling systems, this unit ensures consistent performance and accurate monitoring in demanding environments.

Physical Characteristics

Reservoir Material	Translucent plastic
System Type	Fluid Handling, Electronic Integrated, Level Monitoring

Technical Specifications

Primary Applications

- Cooling systems
- Cleaning apparatus
- Electronic instrumentation
- Fluid level control

Connectivity	Yes
