

# Fluid Quick Coupler

This fluid quick coupler is designed for the quick connection and disconnection of fluid lines. It features robust metal construction for durability and corrosion resistance.

## Product Overview

### RSQ-2/RPQ-2 Fluid Quick Coupler

The RSQ-2/RPQ-2 series fluid quick coupler is engineered for the rapid and reliable connection and disconnection of fluid lines in demanding industrial environments. Featuring a robust metal construction, this coupler offers exceptional durability and resistance to corrosion, ensuring long-term performance. The assembly consists of a threaded socket with a convenient slotted design and a precision-engineered plug featuring an integrated valve mechanism for optimal sealing.

## Technical Specifications

### Components

- Socket with threaded connection
- Plug with valve mechanism

### Construction Material

Robust Metal

### Design Features

Slotted socket design, Precision-engineered plug tip, Corrosion resistant

## Application

### Suitable Systems

Hydraulic Systems • Pneumatic Systems • Fluid Transfer Processes
