

Fluid Shut-Off Ball Valve with Lever Handle

This ball valve is designed for reliable on/off control of fluid flow. It features a durable metal body with a threaded inlet and a lever handle for quick and easy opening and closing.

Overview

Reliable Fluid Flow Control

This fluid shut-off ball valve is engineered for precise and reliable on/off control in various piping systems. Featuring a robust metal body construction, it is designed to withstand standard operational pressures while ensuring a secure, leak-free connection. The intuitive lever handle mechanism allows for rapid, manual actuation, making it an essential component for maintenance and fluid management tasks.

Technical Specifications

Key Features

- Quick shut-off functionality
- Secure threaded inlet
- Hose-compatible outlet
- Screw-on outlet cap included

Operation Type	Manual Lever Handle
Inlet Connection	Threaded
Material Composition	Brass, Stainless Steel, Durable Metal

Performance Metrics

Primary Function

Fluid Control • Shut-Off • Flow Regulation
