

Fluid Transfer Centrifugal Pump

This centrifugal pump is designed for fluid transfer applications. It features a volute casing, impeller, and a coupled electric motor for efficient and reliable operation.

Product Overview

High-Performance Fluid Transfer

This centrifugal pump is engineered for reliable and efficient fluid transfer across diverse industrial applications. Featuring a robust construction with a durable volute casing and precision-engineered impeller, it ensures consistent flow rates and pressure stability. Designed for versatility, this unit is suitable for handling water, chemicals, and various other industrial fluids.

Technical Specifications

Key Components

- Volute casing
- High-efficiency impeller
- Coupled electric motor

Pump Type	Centrifugal
------------------	-------------

Applications

Performance Highlights

Consistent Flow • Pressure Stability • High Durability

Compatible Fluids	Water, Chemicals, Industrial Fluids
--------------------------	-------------------------------------
