

Flyback Transformer for CRT TVs and Monitors

High voltage flyback transformer used in CRT televisions and monitors. It generates the high voltage required to accelerate electrons towards the screen, creating the image.

Product Overview

High-Voltage Flyback Transformer

This high-voltage flyback transformer is engineered for CRT television and monitor applications. It functions as the critical component for generating the necessary high voltage required to accelerate electrons toward the display screen, ensuring clear image formation. Each unit includes an integrated high-voltage output cable alongside precision focus and screen voltage adjustment controls for fine-tuned display performance.

Technical Specifications

Marking Codes

- EFC
- 13.06.05 A 01

Part Numbers

DA42-00132F, DA26-00170A

Features

Core Features

High-Voltage Output Cable • Focus Adjustment • Screen Voltage Adjustment
