

Flyback Transformer for Monochrome Monitors

This flyback transformer is designed for layer-winding in 5-inch to 14-inch monochrome monitors. It provides the high-voltage required for the CRT display, which ensures optimal performance and reliability.

Product Overview

High-Performance Flyback Transformer

This flyback transformer (FBT) is specifically engineered for layer-winding applications in monochrome monitors ranging from 5 to 14 inches. It serves as a critical component for generating the high-voltage power required for CRT display operation. Designed for durability and reliability, this unit is an ideal solution for the repair and maintenance of existing monitor systems.

Technical Specifications

Design Features

- Compact design
- Durable construction
- Wide model compatibility

Compatible Monitor Sizes	5-inch, 14-inch
Application Type	Layer-winding
Primary Function	High-voltage generation for CRT displays

Usage

Intended Use

Replacement • Repair
