

Foldable Vehicle Wheel Chock

This wheel chock is a safety device designed to prevent accidental movement of vehicles, especially on inclines. Featuring a foldable, triangular design, it allows for compact storage and rapid deployment.

Product Overview

Professional Vehicle Safety Solution

This foldable vehicle wheel chock is a high-performance safety device engineered to prevent accidental rolling and movement. Its innovative triangular design allows for compact, space-saving storage while ensuring rapid deployment during maintenance or loading tasks. Built with durability and friction-focused materials, it provides a stable, high-grip anchor for a variety of vehicle types and tire profiles.

Physical Attributes

Design	Foldable triangular
Grip Surface	High-grip base for enhanced ground contact

Compatibility

Application Scenarios

- Vehicle maintenance
- Parking on inclines
- Loading operations

Performance Features

Key Features	Foldable, Anti-slip, Heavy-duty, Compact storage
