

Food and Beverage Filtration System

This high-capacity filtration system is designed for food, beverage, and cereal processing. It features a robust vertical housing with multiple inlet/outlet ports for efficient fluid handling and a conical bottom for solids collection.

Product Overview

Industrial Filtration Solution

This high-capacity filtration system is engineered specifically for demanding food, beverage, and cereal processing environments. It features a robust vertical housing design with multiple inlet and outlet ports to ensure efficient fluid handling and consistent throughput. Built for reliability, the system includes a conical bottom for streamlined solids collection and easy removal, supported by a multi-valve configuration that optimizes flow control and simplifies routine maintenance.

Design & Construction

Housing Configuration	Vertical
Solids Collection	Conical bottom for efficient collection and removal
Material Grade	Industrial Grade, Food-Safe Construction

Operational Features

Flow Control	Multi-valve configuration
Port Configuration	Multiple inlet/outlet ports

Application Suitability

Primary Applications

Food Processing • Beverage Production • Cereal Processing
