

Food and Beverage Industrial Cleaning Machine

This industrial cleaning machine is designed for food and beverage applications. This robust cleaner efficiently removes impurities and contaminants from raw materials, ensuring product quality and safety.

Product Overview

Industrial Food & Beverage Cleaning Solution

This industrial cleaning machine is specifically engineered for food and beverage applications, focusing on the efficient removal of impurities and contaminants from raw materials. Built for durability and continuous operation, it features a high-capacity hopper and adjustable cleaning settings to maintain high productivity. Its design prioritizes hygiene standards, ensuring product safety while minimizing maintenance requirements through an integrated self-cleaning mechanism.

Key Features

Cleaning Capabilities

- Impurity removal
- Contaminant filtration
- Raw material processing
- Self-cleaning mechanism

Operational Highlights

1 Continuous
Operational Mode

1 Minimal
Maintenance

Technical Specifications

Component Details

Component	Function
Hopper	High-capacity input storage
Cleaning Settings	Adjustable for various materials
Self-Cleaning System	Automated maintenance reduction

Design & Hygiene

Food Grade, High-Capacity, Industrial Grade, Hygiene Compliant
