

Food and Beverage Processing Instrument

This precision instrument is designed for food and beverage processing machinery. It is designed for accurate measurements and reliable performance in demanding industrial environments.

Overview

Precision Processing Instrument

This precision instrument is engineered specifically for food, beverage, and cereal processing machinery. It is designed to deliver accurate measurements and reliable performance even in demanding industrial environments. With its durable construction and user-friendly interface, it integrates seamlessly into both new installations and existing production lines to optimize quality and efficiency.

Laser Safety and Specifications

Laser Class

Class 2

Maximum Power Output

1 mW

Wavelength

630-670 nm

Compliance Standards

IEC 60825-1:2014

Technical Features

Application Suitability

- Food processing machinery
- Beverage production lines
- Cereal processing equipment
- Industrial quality control

Integration

Compatible with various industrial control systems
