

Food and Beverage Processing Machine

This industrial machine is designed for processing food and beverages. It features a multi-stage design with a cylindrical upper section and a screw press mechanism.

Overview

Industrial Food & Beverage Processing

This industrial-grade machinery is specifically engineered for the continuous processing of food, beverages, and cereals. Featuring a robust multi-stage design with a specialized screw press mechanism, it ensures high efficiency and reliability in demanding production environments. Constructed from durable, high-quality materials, this equipment is built to withstand rigorous daily operation in professional food processing facilities.

Technical Specifications

Construction Material

Industrial Grade • Durable Construction

Design Configuration

Multi-stage vertical design with base screw press

Operation Mode

Continuous

Key Features

Included Components

- Cylindrical upper section
- Screw press mechanism
- Integrated pressure gauges
- Control valves
- High-power motor
