

Food and Beverage Processing System

This industrial machinery is designed for food, beverage, and cereal processing. The system includes a vertical cylindrical tank, a control panel, and a network of stainless steel pipes and valves.

Overview

Industrial Processing Solution

This industrial-grade system is engineered specifically for the food, beverage, and cereal processing sectors. Designed for durability and precision, it features a vertical cylindrical tank integrated with a comprehensive control panel and a robust network of stainless steel piping. The unit is mounted on an adjustable platform, making it a versatile and stable solution for critical manufacturing processes such as mixing, blending, and pasteurization.

Technical Specifications

Construction Material	Stainless Steel
Design Configuration	Vertical Cylindrical Tank
Mounting	Platform mounted with adjustable legs
Core Processing Capabilities	Mixing, Blending, Pasteurization

Control & Operation

Control Interface

- Integrated control panel
- Multiple pressure gauges
- Manual switches
- Valve control network
