

Food and Beverage Processing Tank

This stainless steel processing tank is suitable for various food and beverage processing applications. It features piping, valves, a pressure gauge, and an electrical control panel.

Product Overview

Professional Processing Solution

This stainless steel processing tank is engineered for high-efficiency operations in the food and beverage industry. Featuring a robust conical bottom design mounted on a heavy-duty steel frame, it ensures optimal drainage and structural stability. The unit comes fully equipped with essential piping, valves, a pressure gauge, and an integrated electrical control panel for seamless integration into your production line.

Technical Specifications

Construction Material	Stainless Steel
Tank Geometry	Conical bottom
Mounting	Steel support frame

Key Features

Included Components

- Piping system
- Control valves
- Pressure gauge
- Electrical control panel

Suitable Applications	Food Processing, Beverage Production, Cereal Processing
