

# Food and Grain Processing Machine

This industrial machine is designed for processing food, beverages, and cereal grains. It is used for cleaning, separating, or sorting grains or other food products.

## Overview

### Industrial Grain Processing Solution

This industrial-grade machinery is engineered for efficient food, beverage, and cereal grain processing. Built with a robust frame and a high-capacity hopper, it is designed to handle demanding industrial-scale production environments. The system integrates a powerful electric motor to ensure consistent performance during cleaning, separating, or sorting operations.

## Technical Specifications

### Key Operational Capabilities

- Grain Cleaning
- Material Separation
- Product Sorting

### Construction Build

Robust Frame • Industrial-Scale Design

### Primary Application

Food Processing, Beverage Production, Cereal Grain Processing

### Drive System

Electric Motor
