

Food Processing Assembly Line

Food processing assembly lines automate the production of food items. These lines are engineered for efficiency, ensuring consistent quality and high throughput.

Overview

Automated Food Processing Solution

This assembly line is engineered for the efficient processing and preservation of duck eggs, specifically optimized for century eggs (preserved duck eggs) and salted duck eggs. The system streamlines the handling of these delicate Asian delicacies, ensuring consistent quality from raw material to finished product. Designed for industrial-scale operations, it maintains the integrity of the unique textures and characteristics required for these traditional food items.

Processing Capabilities

Key Product Characteristics

- Preserved duck eggs: Dark color, translucent texture
- Salted duck eggs: Firm white, bright orange yolk

Supported Products

Preserved Duck Eggs (Century Eggs), Salted Duck Eggs

Operational Standards

Food Safety Compliance

Food Grade Materials • Hygienic Design
