

Food Processing Circular Blade

This circular blade is mainly used in food processing machinery for cutting vegetables, candy, and assisting in food packaging. It is constructed from stainless steel, ensuring a long cutting time and resistance to rust.

Product Overview

Precision Food Processing Circular Blade

This high-performance circular blade is engineered specifically for food machinery applications, including vegetable processing, candy manufacturing, and automated packaging lines. Constructed from premium stainless steel, the blade is designed for durability and longevity in high-volume production environments. Its corrosion-resistant material ensures that the blade remains clean and rust-free, maintaining optimal hygiene standards throughout its extended service life.

Technical Specifications

Key Features

- Corrosion-resistant stainless steel construction
- Long-lasting cutting performance
- Food-grade material suitability
- Designed for high-volume machinery

Material	Stainless Steel
Primary Applications	Vegetable Processing, Candy Manufacturing, Food Packaging
