

Food Processing Circular Blades

Precision-engineered circular knives designed for food processing machinery. Manufactured from high-grade stainless steel, these blades ensure durable, corrosion-resistant, and hygienic operation.

Product Overview

Precision Food Processing Blades

These circular blades are engineered specifically for high-performance food machinery, serving industries ranging from candy and vegetable processing to automated food packaging. Manufactured from high-grade stainless steel, they are designed to maintain sharpness over extended cutting cycles while resisting rust and corrosion. Their durable construction ensures consistent, hygienic performance in demanding slicing, dicing, and portioning applications.

Technical Specifications

Key Features

- Corrosion resistant
- Long-lasting edge retention
- Hygienic operation
- Precision-engineered

Performance Highlights

100 %

Corrosion Resistance

Material	Stainless Steel
Industry Applications	Vegetable Processing, Candy Manufacturing, Food Packaging, Meat Processing, Fruit Processing
