

Food Processing Mill and Filtration System

This industrial machinery is designed for food processing applications, including milling and filtration. The system is used in the processing of grains or other food products and includes hoppers, grinders, and filtration systems.

Overview

Industrial Food Processing Solution

This industrial-grade machinery is specifically engineered for comprehensive food processing applications, integrating both milling and filtration capabilities. Designed for efficiency and precision, the system handles the entire workflow from initial grinding of raw materials like grains to the final refinement of the product. Its robust construction ensures reliable performance in demanding food production environments.

Technical Specifications

Key Components

- Input Hopper
- Grinding Mechanism
- Filtration System

Model ID

N-100

Applications

Grain Processing, Food Milling, Filtration, Product Refinement
