

Foot Operated Dual Cylinder Air Pump

This foot operated air pump features a dual-cylinder design for efficient inflation. It is equipped with a pressure gauge for accurate monitoring and includes a flexible hose with a valve connector.

Product Overview

High-Efficiency Dual Cylinder Design

This foot-operated air pump features a robust dual-cylinder design engineered for rapid and efficient inflation. Its sturdy frame ensures maximum stability during operation, while the integrated pressure gauge allows for precise monitoring to prevent over-inflation. Designed for versatility, the unit includes a flexible hose with a specialized valve connector compatible with a wide range of inflatable items.

Technical Specifications

Mechanism	Foot Operated
Cylinder Type	Dual Cylinder
Pressure Monitoring	Yes

Features

Key Features

- Dual cylinder for faster inflation
- Integrated pressure gauge
- Stable frame construction
- Flexible hose included
- Universal valve connector
