Overview

High-Efficiency Foot Impulse Sealer

This foot-operated impulse sealing machine utilizes advanced electrical pulse technology to significantly reduce sealing times from seconds to just 0.2 seconds. Designed for versatility, it is suitable for a wide range of materials including aluminum foil, plastic, and compound bags. It serves as an essential, high-efficiency tool for industries such as food processing, pharmaceuticals, cosmetics, and chemical manufacturing.

Performance

Sealing Time

0.2 s

Operational Time

Compatible Materials

Aluminum Foil, Plastic Film, Compound Bags

Operational Guidelines

Safety & Operation

- Keep hands clear of the sealing area during operation to avoid scalding.
- Ensure the bag mouth is flat and free of foreign matter before sealing.
- Turn the heat adjusting knob anticlockwise to the minimum position when stopping.
- Do not allow the suspended part of the heating wire to exceed 2mm at either end.
- Increase temperature gradually from low to high to avoid damaging the heating wire or press glue.

Technical Features

Key Features

Foot-Operated • Adjustable Heating Time • Electrical Pulse Technology • High Efficiency

Industry Applications

Suitable Industries

Industry Sector

Food & Beverage

Pharmaceuticals

Cosmetics
