

# Forestry Harvester Bar

These harvester bars are designed for demanding forestry applications. They are constructed from durable materials to withstand rigorous use and provide extended service life.

## Product Overview

### High-Performance Forestry Solutions

These harvester bars are engineered for demanding forestry applications, providing the durability and reliability required for rigorous field use. Precision-manufactured to ensure optimal chain alignment, they deliver smooth and efficient cutting performance. Designed to withstand harsh environments, these bars offer an extended service life to maximize productivity in the woods.

## Technical Specifications

### Material Technology

Titanium

### Key Performance Features

- Precision-engineered alignment
- High-durability construction
- Optimized for smooth cutting

### Suitable Applications

Forestry, Heavy-duty harvesting
