

Forged Carbon Steel Delta Ring with Yellow Chromate Finish

Forged from carbon steel, this delta ring features a yellow chromated finish. Its weldless design ensures structural integrity for secure and durable connections in rigging, tie-downs, and other heavy-duty applications.

Product Overview

High-Strength Delta Ring Design

This forged carbon steel delta ring is engineered for demanding heavy-duty applications, including industrial rigging and secure tie-downs. The weldless construction provides superior structural integrity by eliminating weak points, ensuring maximum safety under load. Finished with a yellow chromate coating, the component offers exceptional corrosion resistance while providing high visibility in diverse work environments.

Technical Specifications

Material	Forged Carbon Steel
Finish	Yellow Chromate
Construction	Weldless

Usage and Applications

Product Benefits

- Forged for high durability
- Weldless design for structural integrity
- Corrosion-resistant coating
- High-visibility yellow finish

Common Uses	Rigging, Tie-downs, Load-bearing, Heavy-duty Industrial
