

Forged Crankshaft for Industrial Pumps

High-strength crankshaft designed for heavy-duty industrial pumps. It is manufactured from ZG25MnVCU steel, ensuring durability and resistance to wear.

Product Overview

High-Performance Industrial Crankshaft

This forged crankshaft is precision-engineered for heavy-duty industrial pump applications. Manufactured from high-strength ZG25MnVCU steel, it offers exceptional durability and superior resistance to wear under demanding operational conditions. Designed for reliability, this component ensures optimal performance for various pump systems requiring robust mechanical support.

Material & Construction

Manufacturing Method

Forged • Precision Engineered

Material Grade

ZG25MnVCU Steel

Application Details

Compatibility

- Industrial pumping equipment
- High-load mechanical systems

Primary Application

Heavy-duty industrial pumps
