

# Forged Steel Bearing

These forged steel bearings are designed for demanding applications requiring durability and load-bearing capacity. They are manufactured from high-quality steel, ensuring optimal performance and reliability in heavy machinery, automotive components, and industrial equipment.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Forged Steel Bearings

These forged steel bearings are engineered for heavy-duty industrial applications, offering exceptional durability and load-bearing capacity. Designed to meet strict international standards, they are suitable for use in rotary tables, cranes, and various heavy machinery. Each unit undergoes rigorous manufacturing processes to ensure optimal grain flow, material integrity, and long-term reliability in demanding environments.

## Technical Specifications

### Delivery Condition

- Rough Machined
- Semi-machined
- Finishing Machined

### Maximum Weight Capacity

35 MT

### Available Materials

Carbon Steel, Stainless Steel, Alloy Steel

## Compliance & Standards

### Quality Control

ISO9001-2008

### Supported Standards

GB, JIS, ISO, ANSI, ASTM, BS, DIN

## Logistics

### Packaging

Suitable for sea freight and customized to specific requirements.
