

Forged Steel Pipe Fitting

Forged pipe fittings are designed for robust performance in demanding industrial applications. Constructed from durable forged steel, they ensure reliable connections and leak-proof seals in various sizes and configurations.

Overview

Professional Grade Forged Pipe Fittings

These high-pressure forged pipe fittings are engineered for robust performance in demanding industrial piping systems. Manufactured to meet international standards, they ensure secure, leak-proof connections across hydraulic, pneumatic, and fluid transfer applications. With a wide range of material options and configurations available, these fittings provide the durability and corrosion resistance required for critical infrastructure projects.

Technical Specifications

Connection Types

BW (Butt Weld) • SW (Socket Weld)

Available Angles

30°, 45°, 60°, 90°, 180°

Material Composition

Carbon Steel, Stainless Steel, Alloy Steel

Dimensions & Capacity

Size Range

15mm - 3200mm

Wall Thickness

SCH10 - SCH160, XXS

Outer Diameter (OD)

DN15 - DN3200

Compliance & Quality

Supported Standards

- ANSI
- JIS
- BS
- DIN
- GB
- API
- MSS

Certifications

API, ISO 9001:2000

Logistics

Packaging Options

Wooden cases, wooden pallets, or custom requirements
