

# Forged Steel Sleeve

The forged steel sleeve is suitable for semi-finished forgings or finished products. It delivers excellent performance, a long service life, and a competitive price.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Forged Steel Sleeves

These precision-engineered forged steel sleeves are designed for demanding industrial applications requiring exceptional strength and durability. Manufactured from high-grade materials, they offer superior resistance to wear and tear, ensuring a long service life in heavy machinery and hydraulic systems. With versatile material options and robust heat treatment processes, these sleeves provide reliable performance under high-stress conditions.

## Technical Specifications

### Maximum Dimensions

<b>2 m</b> Max Diameter	<b>6 m</b> Max Length
----------------------------	--------------------------

### Supply State

Semi-finished Forgings • Finished Products

### Available Materials

Carbon Steel, Stainless Steel, Alloy Steel

### Heat Treatment Process

N + T + Q (Normalizing + Tempering + Quenching)
