

Forged Step Shaft

Precision forged step shafts are manufactured with high-quality materials. These shafts are designed for demanding applications requiring strength, durability, and precise dimensions.

Product Overview

Precision Forged Step Shafts

These forged step shafts are engineered for demanding industrial applications requiring exceptional strength and durability. Manufactured using advanced forging techniques, they offer precise dimensions suitable for heavy machinery, automotive, and industrial equipment. Our production capabilities allow for extensive customization, including material selection, heat treatment, and surface finishing to meet specific project requirements.

Technical Capabilities

Maximum Machining Size	1200mm x 6000mm
Minimum Machining Size	100mm x 20mm
Annual Production Capacity	7000 tons

Material Specifications

Available Materials	Carbon Steel, Stainless Steel, High-speed Steel, Die Steel, High-temperature Alloy Steel, Copper, Aluminum, Low-carbon Alloy
---------------------	--

Quality & Standards

Quality System Certification
GB16949
