

Forklift Engine

This engine is designed for forklift applications. It features a mechanical fuel injection system for precise fuel delivery and efficient combustion.

Product Overview

Industrial-Grade Forklift Engine

This robust and reliable engine is specifically engineered for demanding forklift applications in industrial environments. It features a mechanical fuel injection system for precise fuel delivery and efficient combustion, supported by a high-strength cast iron block for long-term durability. Designed with maintenance and serviceability in mind, it includes integrated cooling and filtration systems to ensure consistent performance under heavy workloads.

Technical Specifications

Fuel Injection Type	Mechanical
Engine Block Material	High-strength cast iron

Features

Key Features

- Mechanical fuel injection system
- High-strength cast iron block
- Integrated cooling fan
- Oil filtration system
- Easy maintenance design

Maintenance Level

Easy Serviceability • Industrial Grade
