

Forklift Fork Extensions

Forklift fork extensions increase the reach and versatility of forklifts. They are made from high-strength steel and slide over existing forks for added support when handling longer loads.

Overview

Heavy-Duty Forklift Extensions

These heavy-duty fork extensions are engineered to significantly increase the reach and versatility of your existing forklift equipment. Constructed from high-strength steel, they ensure durability and safety when handling longer or oversized loads. Designed to slide easily over standard forks, they provide the added support and stability required for demanding applications in warehouses, construction sites, and agricultural environments.

Key Features

Material Construction

High-Strength Steel • Heavy-Duty Build

Ideal Applications

Warehousing, Construction Sites, Agricultural Settings, Oversized Load Handling

Installation Method

Slide-over design for quick and easy attachment
