

Forklift Forks Heavy Duty Steel

Heavy-duty forklift forks are constructed from high-strength steel for lifting and transporting heavy loads. They feature a robust L-shaped design for optimal load distribution and a smooth surface finish to prevent damage to goods.

Product Overview

Heavy-Duty Forklift Forks

These heavy-duty forklift forks are constructed from high-strength steel, specifically engineered for the demanding requirements of lifting and transporting heavy loads. The design features a robust L-shaped configuration that ensures optimal load distribution during operation. With a smooth surface finish, these forks are built to prevent damage to goods while providing a secure and reliable mounting system for easy attachment to industrial forklifts.

Technical Specifications

Ideal Applications

- Industrial operations
- Construction sites
- Heavy load transport

Material	High-strength steel
Design Features	L-shaped design, Smooth surface finish, Heavy-duty construction
